Education

Georgia Institute of Technology — Atlanta, GA
Master of Science in Computer Science, GPA: 3.87/4.00 — *Aug 2024 – Expected Dec 2026*
- Specialization: Machine Learning

Inha University — Incheon, South Korea
Bachelor of Science in Computer Engineering, GPA: 3.72/4.00 — *Mar 2013 – Feb 2019*

Experience

Data Engineer — May 2024 – Oct 2024
Overdare — *Seoul, South Korea*
- Maintained dbt transformations in Snowflake and monitored Kafka-based streaming pipelines on Kubernetes, diagnosing and resolving pipeline failures for a metaverse platform
- Built a FastAPI backend service for game-usage metrics; automated mobile-app testing using Appium and AWS Device Farm

Software Engineer — Feb 2024 – May 2024
NHN DATA — *Seongnam, South Korea*
- Built a customer-facing RAG chatbot backend for the AceCounter analytics platform using Python, LangChain, the OpenAI API, and Pinecone; curated product documentation and engineered prompts to answer customer questions

Software Engineer — Mar 2021 – Feb 2024
NHN — *Seongnam, South Korea*
- Built and operated a GA4 analytics service with Airflow pipelines, BigQuery/Athena data marts, and a Django/Celery/PostgreSQL backend with OAuth 2.0 authentication; deployed the service to AWS EKS using Docker and Terraform
- Designed and built a REST API using API Gateway and Lambda to trigger Spark pipelines on AWS EMR for predictive customer metrics, processing terabyte-scale purchase data from group affiliates and Shopify merchants
- Automated scheduled analytics reports using Papermill, Jupyter, AWS ECS, and Lambda, generating charts and narrative text from parameterized notebooks

Software Engineer — Jan 2019 – Mar 2021
NHN PAYCO — *Seongnam, South Korea*
- Developed an internal self-service analytics platform using Airflow and Metabase, building workflows across two on-premises Hadoop clusters and organizing datasets into layered structures for analytics use cases
- Built Spark pipelines on an on-premises Hadoop cluster to process millions of advertising identifiers for a customer data platform; developed Spring Boot services for audience filtering and identifier export
- Built a Java/Spring Boot query gateway and JDBC driver for Presto, Impala, and MySQL, supporting parallel query execution, result aggregation, and selection of the fastest response across multiple databases

Projects

Speed Camera Map | speedcameramap.mschoi.com | *FastAPI, Oracle Cloud* — Jul 2025 – Present
- Built and deployed an interactive web map used by 9,000+ monthly active users with speed-camera locations, metadata, and address-based search
- Developed preprocessing scripts to transform data from a public REST API into application-ready geospatial records and automated daily updates on Oracle Cloud
- Integrated the Naver Maps API for map visualization and the VWorld address-search API via a FastAPI backend

Technical Skills

Languages: Python, Java, SQL, JavaScript
Backend & APIs: Django, FastAPI, Spring Boot, Celery, REST APIs, OAuth 2.0, Keycloak
Data Engineering: Spark, Airflow, dbt, Kafka, Hadoop, Snowflake, BigQuery, Athena, Presto/Trino, Impala
Cloud & Infrastructure: AWS, GCP, Docker, Kubernetes, Terraform, EMR, ECS, Lambda, API Gateway
ML/AI: PyTorch, scikit-learn, LangChain, OpenAI API, Pinecone
Databases & Tools: PostgreSQL, MySQL, Git, Jupyter, Metabase
AI Development Tools: OpenAI Codex, Cursor
